RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

Activity: Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

Total Points: 100

Criteria	Excellent (100%)	Proficient (75%)	Developing (50%)	Incomplete (0%)	Score
VM Type & Version (10 pts)	Correctly selects Ubuntu (64-bit) as the OS type and version. Matches the downloaded ISO architecture.	Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works.	Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.	Fails to select any valid OS type; cannot proceed.	/10
Memory (RAM) Allocation (15 pts)	Allocates 4-8GB RAM as required. Understands the host system limitation.	Allocates 3GB – 3.5GB (sufficient but slightly below requirement).	Allocates 2GB or less — causes severe lag or installation failure.	Allocates no RAM or invalid value.	/15
Processor (CPU) Allocation (15 pts)	Allocates 4 CPU cores with 100% execution cap. Enables PAE/NX if available.	Allocates 2 cores but does not adjust execution cap or nested VT x settings.	Allocates only 1 core — installation takes extremely long.	Fails to configure processor settings.	/15

Hard Drive (Storage) Setup (20 pts)	Allocates 100 GB dynamically allocated storage (or fixed). Created a partitioning in drive.	Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.	Allocates less than 20GB — insufficient for installation.	No hard drive created; VM cannot boot.	/20
ISO Attachment & Boot Order (15 pts)	Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot	Attaches ISO but forgets to adjust boot order — manually boots	Attaches ISO but boot order wrong — VM boots to blank screen.	Fails to attach ISO; VM cannot install.	/15

	order: Optical → Hard Disk .	via "Force BIOS" first time.			
Proper Installation Execution (25 pts)	Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI.	Completes installation but makes minor errors (e.g., wrong timezone — fixes later).	Installation starts but fails midway (partitioning error, corrupt ISO, or power loss).	Installation not attempted or aborted.	/25

TOTAL SCORE: ____ / 100
DOCUMENTATION REQUIREMENT

Student Name: Jiana Mae Pelones

Date: 08-27-26

VM Name: Pelones_elective3

1. VM Specifications Summary

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM 4 GB (4000 MB) CPU Cores 4

Hard Drive Size 100 GB (Dynamic / Fixed) Storage Controller

SATA / SCSI

Network Adapter NAT / Bridged

ISO File Used ubuntu 64bit

2. Step-by-Step Setup Process

(Describe what you did, in order. Include commands used, if any.)

1. I opened **VirtualBox** and created a new virtual machine. I named it **Pelones_elective3**.
2. I selected **Ubuntu (64-bit)** as the operating system. I also assigned **4 GB of RAM** and **4 CPU cores** to the virtual machine.
3. I created a **100 GB virtual hard disk** and used the **SATA storage controller** for the storage.
4. I attached the **Ubuntu 64-bit ISO file** to the virtual machine and started it to begin the Ubuntu installation.
5. I followed the installation instructions on the screen until the installation was finished. After restarting the VM, I opened the **Terminal** to check if Ubuntu was working properly.

3. Issues Encountered & Resolutions

(List any problems during setup and how you fixed them.)

Issue	Solution
I had to start and restart the VM several times because I forgot to take some of the required screenshots. I also encountered some errors while starting the virtual machine.	I restarted the VM and repeated the necessary steps. I checked the VM settings and made sure the Ubuntu ISO was properly attached. After fixing the settings, I was able to start the VM and continue the installation.

4. Verification Screenshots

(Paste screenshots here or attach separately)
